## Consumption

DeA Capital's ESG Policy and Green Procurement Policy, as well as the PRI and Global Compact guidelines, require **limiting the consumption of valuable resources** such as electricity, paper and water.

DeA Capital, in addition to using electricity from renewable sources for its buildings in Milan and Rome, applies a series of measures internally (less heavy and recycled paper, glass instead of plastic, regenerated toner, etc.). Similarly, each of its subsidiaries implements internally a series of initiatives compliant with the best practice indicated by the PRI, which aim to reduce the overall impact of its activities.

**Moreover as manager of an alternative asset Platform with about €26,5 billion under management, it can really make a difference,** hence the group strategy aims to continuously improve the sustainability effort of the whole Group and of its investments.

## Paper Consumption

In the last three years, the company has reduced paper consumption by more than 50%.

This reduction, which was partially linked to the 2020 lockdown period, became practice and was consolidated in 2021.

# Environmental Impact

## Green Mobility

DeA Capital Group intends to positively impact climate change and reduce emissions in the coming years through **Green Mobility**.

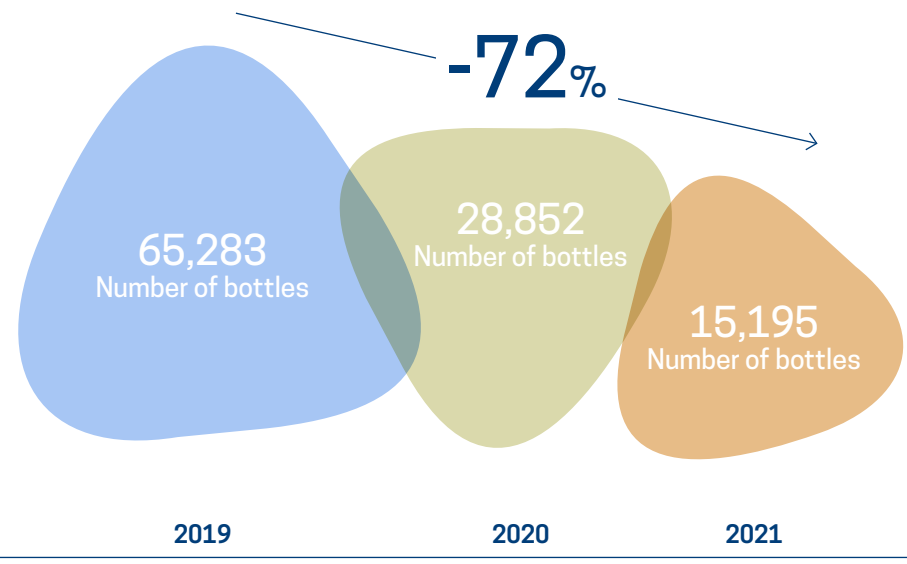

DeA Capital is in fact aware of the positive impact that hybrid and electric vehicles can have on the same route compared to vehicles with diesel or petrol engines.

Consequently, a commitment to focus on modes of transport that take into account its commitment to reduce emissions overall, is currently being formalized.

Significant improvements have already been made for 2021 compared to 2020:

- the average CO<sub>2</sub> figure (g/km) on the emissions of vehicles on the car list drops from 138 g/km to 92 g/km;
- the figure for “**hybrid cars** available in the perimeter” **rises from 62% to almost 71%**;
- 3 totally electric models have been introduced.

## Plastic Free Project

DeA Capital’s Alternative Asset Management Platform is concentrated in the two buildings of Milan and Rome. Following the commitments made in the Green Procurement Policy, the Group have undertaken a Plastic Free Project to replace water bottles with new dispensers for running water and flasks. **As a result in 2021 there has been a considerable decrease in the consumption of plastic bottles -72% equals to over 50,000 plastic bottles saved.**
